

ABSTRACT

5 Signalling between transmitting means and receiving means wherein  
signals from the transmitting means are subjected by the receiving means to  
deliberate reflections and resulting signals are transmitted back as  
meaningful at the transmitting means, different deliberate reflections  
having effects on said resulting signals that have different meanings at  
said transmitting means. Two-way signalling involves first signalling in  
10 one direction by sending signals with certainty of deliberate reflection  
thus resulting signals for return related to the signals sent according to  
the nature of the deliberate reflection and second signalling in the other  
direction by varying the nature of the deliberate reflection.
